

IMPORTANT NOTE FOR PROTOOLS USERS

MAC OS: for reasons we have yet to uncover, the 'cmd-opt-ctrl-click' shortcut for opening a control's enable/disable automation menu does not open the menu, and zeros out the control instead.

Until that bug is squashed, Mac OS users of UBK-1 in Pro Tools will need to enable its automation enabled via PT's plugin 'auto' menu button instead. We'll have a fix as soon as humanly possible!
